About UMS Data Governance

The University of Maine System Data Governance program, with representatives from each campus and functional area, emphasizes the importance of data integrity and formalizes processes related to the management and usage of institutional data: the data the University of Maine System maintains concerning its students, employees, and finances. The program developed frameworks, processes and workflows to effectively identify, address, and resolve inaccuracies in our data. This enables proper use of our data to reach our ultimate goal: improved system-wide processes and decision-making in support of our students, faculty, and staff.

Data Governance needs everyone. Data quality (good and bad!) impacts every one of us.

We need input from everywhere to make this work.

Please consider joining our efforts!

UMS Data Governance Mission & Vision

Mission

Ensure valid and reliable data are readily accessible to university constituents, internal and external, for secure and ethical use.

Vision
Data of the campuses in the University of Maine System (UMS) are system-wide institutional assets. These assets are protected and leveraged to benefit all UMS institutions and stakeholders.
