**Windows 10: Change my display settings**

**Change Screen Resolution on Windows 10**

Go to your Desktop, right-click your mouse and go to **Display Settings**.

The following panel will open. Here you can adjust the size of text, apps, and other items and also change the orientation. To change the resolution settings, scroll down this window and click on Advanced Display Settings.

1366 X 768 is the recommended screen resolution for my PC. It may be different for you.

However, you may want to modify if you want the items in your PC to appear larger. Please note that lower is the resolution, larger is the content displayed on your screen. From the available options in the drop-down menu, select the one you want and click Apply.

If it is not the optimal setting for your system, you will see an Optimal Resolution Notification like this.

You may ignore the notification and confirm your Screen Resolution changes by clicking on **Keep The Changes**. or you may select another screen resolution. You will get just 15 seconds to confirm the changes or else it will revert to the default display settings.
